NWE NWE WIN THAN

Senior Software Engineer — Full-Stack Developer

• Tokyo, Japan • Valid Japanese work visa • +81 70-2252-7003 • nwenwewinthan777@gmail.com
• linkedin.com/in/nwe-nwe-win-than • github.com/NweNweWinThan-X • Portfolio

SUMMARY

Full-stack software engineer with 8+ years building and operating business-critical web systems, including nearly 4 years in Tokyo. Three of those systems were in the financial domain — a securities CRM, a banking platform covering payments, fund management and loan products, and a financial business system. Current stack is Java 21 / Spring Boot with React; previously C# / .NET MVC and PHP / Laravel. Owns features end to end across both tiers: requirements definition, detailed design, implementation, and unit through operational testing. Led three projects as team leader, running daily progress tracking, task allocation and code-review standards for teams of five to seven. Business-level English and Japanese.

CORE SKILLS

Languages Java (21, 17), C#, VB.NET, PHP, JavaScript, TypeScript, SQL, HTML, CSS

Backend Spring Boot, Spring Security, Spring Data JPA, Thymeleaf, Laravel, ASP.NET MVC, .NET Framework, REST API design, batch processing, JWT authentication, role-based access control

Frontend React, Vue.js, Vuex, Nuxt.js, Tailwind CSS, Bootstrap, Vuetify, jQuery, Vite

Databases PostgreSQL, MySQL, Oracle, SQL Server, Flyway migrations, schema design, query tuning

Infrastructure & Tooling Docker, AWS (S3, SNS, CloudWatch), GitHub Actions, GitLab CI, Azure DevOps, Tomcat, Apache, IIS, Git, Maven, Linux

Testing & Quality JUnit, Playwright, unit / integration / system / operational test design, test-case authoring, regression testing, code review

Delivery Agile / Scrum, SOLID principles, requirements definition, basic and detailed design, technical documentation, release support, stakeholder and QA coordination, technical mentoring

Currently building Kubernetes, Redis, AWS, Terraform — see *Selected Project* below

KEY STRENGTHS

Fintech domain depth — Three financial systems across eight years — a securities CRM, a banking platform and a financial business system — in a field where correctness and auditability are the job.

Full lifecycle ownership — Requirements definition, basic and detailed design, build, and unit through operational testing, with the design documents and test specifications to match.

Production migration safety — Took a live brokerage CRM through an Oracle version upgrade using full-screen new-versus-current comparison and regression testing.

Team leadership — Team leader on three projects: schedule management, task allocation, resource planning and code review for teams of five to seven.

Bilingual delivery — Four years in Japanese-language engineering teams in Tokyo, including specification coordination with a Japanese government ministry.

PROFESSIONAL EXPERIENCE

Senior Software Engineer — Generic Solutions Co., Ltd. · Tokyo, Japan

Nov 2024 – Present · Java / Spring Boot · teams of 5–6

GS8 Banking System (Dec 2024 – Present) — payments, fund management and loan servicing

- Designed and built front-end and back-end features for loan product servicing and plan-versus-actual reconciliation, taking each through detailed design, implementation, and unit, integration, system and operational testing.
- Built REST endpoints and Spring Boot service layers backing React and Thymeleaf interfaces, keeping a single domain model across both rendering paths.
- Optimise database queries and application logic on loan-servicing screens, reducing page response times on the heaviest views.
- Authored design documents, UT/IT specifications and test cases, then reviewed teammates' code against them to hold a consistent quality bar across a six-person team.

Java 21, Spring Boot, Thymeleaf, React, Tailwind CSS, Bootstrap, MySQL, PostgreSQL, Docker, AWS, Tomcat, GitLab, Redmine

GS8 WorkBench — Attendance & Workforce Management (Nov 2024 – Feb 2025)

- Delivered attendance, work-reporting, paid-leave and task-progress features for an internal workforce platform used across the organisation, covering build and test phases.
- Instituted a daily stand-up review of progress, current work and remaining tasks across the five-person team, which removed duplicated and dropped work items.

Java, Spring Boot, Thymeleaf, Bootstrap, jQuery, MySQL, Tomcat, GitLab, Redmine

Software Engineer — Starsoft Co., Ltd. · Tokyo, Japan

Dec 2022 – Oct 2024 · C# / VB.NET / ASP.NET MVC · teams of 5

WF Document Integration System (Jun 2023 – Oct 2024) — workflow, application and approval routing

- Implemented detailed design through operational testing for case management, scheduling and approval-document features on an enterprise workflow platform.
- Built batch programs for scheduled document processing, removing manual steps from the approval pipeline.
- Produced UT/IT specifications and test cases, and handled QA and specification clarification with the project lead throughout a 17-month engagement.
- Carried out maintenance and performance work on existing modules while new features shipped in parallel.

VB.NET, C#, ASP.NET, .NET Framework, MVC, jQuery, Oracle, SQL Server 2012, IIS, TFS, Azure DevOps, A5:SQL Mk-2

Tokai Tokyo Securities — CRM System (Dec 2022 – May 2023)

- Added and unit-tested customer-management screens for a securities CRM serving brokerage staff.
- Validated an Oracle version upgrade by running full-screen verification and new-versus-current comparison testing across the application, then regression and system testing — protecting a production brokerage system through the migration.
- Replaced an Excel-and-macro inquiry-tracking process with a web-based module, moving customer enquiry handling into the system of record.
- Managed insurance information and analysis features in coordination with business users and QA.

C#, ASP.NET, .NET Framework, MVC, jQuery, Oracle, Visual Studio, Redmine

Developer → Senior Developer → Team Leader — Seattle Consulting Co., Ltd. / META TEAM Co., Ltd. · Yangon, Myanmar

Jun 2018 – Oct 2022 · PHP / Laravel / Vue.js · teams of 5–7 · Team Leader from Feb 2020

ToolSite — Web Catalog & Product Management System (Jul 2018 – Feb 2022)

- Owned product-management and batch features across the full lifecycle — requirements definition, basic and detailed design, build, and unit through operational testing — on a three-and-a-half-year engagement.
- Promoted after 18 months and ultimately to Team Leader; took on schedule management, task allocation and code review for a six-person team, and proposed the technology choices for new modules.
- Proposed a re-sequenced task plan to the project lead when the team fell significantly behind schedule, and took on redistribution of work to recover the delivery date.
- Integrated AWS S3, SNS and CloudWatch for asset storage, notifications and monitoring.

PHP, Laravel, Vue.js, Vuex, Sass, Bootstrap, CoreUI, Vuetify, MySQL, Docker, AWS (S3/SNS/CloudWatch), GitHub

Axis — Energy Management System (Feb 2022 – May 2022) · Team Leader

- Built electricity capacity search, consumption calculation and aggregation features, plus chart-based dashboards, for a reporting system spanning municipal and prefectural bodies.
- Ran the full lifecycle from requirements definition to operational testing as team leader of a seven-person team, including the next-version upgrade plan.

PHP, Laravel, Vue.js, Vuex, Chart.js, Bootstrap, MySQL, BitBucket

Spider — Construction Management System (May 2022 – Oct 2022) · Team Leader from Jun 2022

- Coordinated specifications directly with Japan's Ministry of Health, Labour and Welfare, then designed, built and tested the agreed features for site, worker, drawing and process management.
- Set scheduling, resource allocation and task assignment for a five-person team, and ran the customer helpdesk for production issues.
- Wrote the resource-flow and setup documentation that the team used for environment provisioning.

PHP, Laravel, Vue.js, Vuex, Nuxt.js, Vuetify, Bootstrap, PostgreSQL, Docker, GitHub

Intern Developer — OK Dollar Co., Ltd. · Yangon, Myanmar

Oct 2017 – Apr 2018 · C# / ASP.NET MVC · team of 5

OK$ Financial Business System

- Developed contract-management batch processing and new application features for an internal financial services platform, then tested through unit, integration and operational phases.
- Built RESTful APIs and designed, implemented and tested the web interfaces consuming them.
- Ran maintenance and performance-improvement work on the existing application.
- Gathered requirements directly from clients to clarify complex specifications before build.

C#, ASP.NET, .NET Framework, MVC, JavaScript, Bootstrap, jQuery, MSSQL

SELECTED PROJECT

spring-boot-todolist — REST API + React SPA

github.com/NweNweWinThan-X/spring-boot-todolist

A task-management application built as a Spring Boot modular monolith serving JSON to a separate Vite single-page app — written to practise the patterns enterprise projects rarely leave room for.

- **Backend** Java 21, Spring Boot 4, Spring Security 7, Spring Data JPA, Flyway, PostgreSQL. Stateless JWT (HS384) authentication with role-based access control and per-account data isolation.
- **Frontend** React 19, TypeScript, Vite, Tailwind CSS.
- **CI/CD** GitHub Actions with four parallel jobs — Maven verify over 32 unit and slice tests, a TypeScript type check and production build, 22 Playwright end-to-end tests against a `postgres:17-alpine` service container, and a Docker build of both images. A tagged release publishes both images to GitHub Container Registry.
- **Documentation** ER diagram, request flow, design rationale, test strategy and CI/CD pipeline documented in-repo, in English and Japanese.

EDUCATION

Bachelor of Computer Science (B.C.Sc.) — University of Computer Studies, Magway, Myanmar Dec 2012 – Feb 2018

CERTIFICATIONS

AWS AI Practitioner · Jun 2026
