Nwe Nwe Win Than

Senior Software Engineer — Full-Stack Developer

Full-stack software engineer with 8+ years building and operating business-critical web systems, including nearly 4 years in Tokyo. Three of those systems were in the financial domain — a securities CRM, a banking platform covering payments, fund management and loan products, and a financial business system. Current stack is Java 21 and Spring Boot with React; previously C# / .NET MVC and PHP / Laravel. Owns features end to end across both tiers, from requirements definition through operational testing, and led three projects as team leader for teams of five to seven.

Key Strengths

Fintech domain depth — Three financial systems across eight years — a securities CRM, a banking platform and a financial business system — in a field where correctness and auditability are the job.

Full lifecycle ownership — Requirements definition, basic and detailed design, build, and unit through operational testing, with the design documents and test specifications to match.

Production migration safety — Took a live brokerage CRM through an Oracle version upgrade using full-screen new-versus-current comparison and regression testing.

Team leadership — Team leader on three projects: schedule management, task allocation, resource planning and code review for teams of five to seven.

Bilingual delivery — Four years in Japanese-language engineering teams in Tokyo, including specification coordination with a Japanese government ministry.

Experience

2024 - Present

Senior Software Engineer

Generic Solutions Co., Ltd. — Tokyo, Japan

GS8 Banking System · GS8 WorkBench

- Build front-end and back-end features for a banking platform covering payment processing, fund management and loan servicing, carrying each from detailed design through unit, integration, system and operational testing.
- Develop REST endpoints and Spring Boot service layers that back both React and Thymeleaf interfaces from a single domain model, so the two rendering paths cannot drift apart.
- Optimise database queries and application logic on loan-servicing screens, reducing page response times on the heaviest views.
- Delivered attendance, work-reporting, paid-leave and task-progress features for GS8 WorkBench, an internal workforce platform used across the organisation.
- Author design documents, UT/IT specifications and test cases, then review teammates' code against them to hold one quality bar across a six-person team.

Java 21, Spring Boot, Thymeleaf, React, Tailwind CSS, MySQL, PostgreSQL, Docker, AWS, Tomcat, GitLab

2022 - 2024

Software Engineer

Starsoft Co., Ltd. — Tokyo, Japan

WF Document Integration System · Tokai Tokyo Securities CRM

- Validated an Oracle version upgrade across an entire production brokerage CRM — full-screen verification, new-versus-current comparison, then regression and system testing — protecting a live securities system through the migration.
- Implemented detailed design through operational testing for case management, scheduling and approval-document features on an enterprise workflow platform across a 17-month engagement.
- Built batch programs for scheduled document processing, removing manual steps from the approval pipeline.
- Replaced an Excel-and-macro inquiry-tracking process with a web module, moving customer enquiry handling into the system of record.
- Produced UT/IT specifications and test cases, and handled QA and specification clarification with project leads throughout.

VB.NET, C#, ASP.NET, .NET Framework, MVC, jQuery, Oracle, SQL Server 2012, IIS, TFS, Azure DevOps

2018 - 2022

Developer → Senior Developer → Team Leader

Seattle Consulting Co., Ltd. / META TEAM Co., Ltd. — Yangon, Myanmar

ToolSite · Axis · Spider

- Owned product-management and batch features across the full lifecycle — requirements definition, basic and detailed design, build, and unit through operational testing — on ToolSite, a three-and-a-half-year catalogue engagement.
- Promoted after 18 months and ultimately to Team Leader; took on schedule management, task allocation and code review for teams of five to seven, and proposed the technology choices for new modules.
- Recovered a slipping delivery date by proposing a re-sequenced task plan to the project lead and redistributing work across the team.
- Coordinated specifications directly with Japan's Ministry of Health, Labour and Welfare on Spider, a construction management system, then designed, built and tested the agreed features and ran the customer helpdesk.
- Built capacity search, consumption calculation and chart dashboards for Axis, an energy management system spanning municipal and prefectural bodies.
- Integrated AWS S3, SNS and CloudWatch for asset storage, notifications and monitoring.

PHP, Laravel, Vue.js, Vuex, Nuxt.js, Vuetify, Sass, MySQL, PostgreSQL, Docker, AWS (S3/SNS/CloudWatch), GitHub

2017 - 2018

Intern Developer

OK Dollar Co., Ltd. (OK$) — Yangon, Myanmar

OK$ Financial Business System

- Developed contract-management batch processing and new application features for an internal financial services platform, tested through unit, integration and operational phases.
- Built RESTful APIs and designed, implemented and tested the web interfaces consuming them.
- Gathered requirements directly from clients to clarify complex specifications before build.

C#, ASP.NET, .NET Framework, MVC, Bootstrap, jQuery, MSSQL

Selected Project

spring-boot-todolist · github.com/NweNweWinThan-X/spring-boot-todolist
REST API and React SPA built as a Spring Boot modular monolith, written to practise the patterns enterprise projects rarely leave room for.

- Java 21, Spring Boot 4, Spring Security 7, Spring Data JPA, Flyway, PostgreSQL. Stateless JWT (HS384) with role-based access control and per-account data isolation.
- React 19, TypeScript, Vite, Tailwind CSS.
- GitHub Actions running four parallel jobs: Maven verify over 32 unit and slice tests, a TypeScript check and build, 22 Playwright end-to-end tests against a postgres:17-alpine service, and a Docker build of both images. Tagged releases publish to GitHub Container Registry.
- ER diagram, request flow, design rationale, test strategy and CI/CD documented in-repo in English and Japanese.

Education

2012 - 2018

University of Computer Studies, Magway

Bachelor of Computer Science (B.C.Sc.) — Magway, Myanmar

Learning

Kubernetes · Redis · AWS · Terraform
